

Please replace the paragraph beginning at page 27, line 1, with the following rewritten paragraph:

--Representative flowcharts and pseudocode for the user action routines are shown in Figures 24-30. Figures 24A-1, 24A-2, and 24B show the flowchart and pseudocode for the routine doBA (2310). As detailed above, the user selection “B” inserts the source element before the target element, and “A” inserts the source element after the target element. Block 2402 checks the Target Element for absolute position. If yes, block 2404 sets the div fields, sets the Target Element variables, replaces the *Element*(targetEle) with *Element*(div), and makes a new child chain of the *Element*(div). Block 2406 next checks if the Source Element is NULL. If yes, then a new source *Element* is retrieved in block 2407. Block 2408 checks the source element for absolute position. If yes, then the source *Element*’s variables are set in block 2409. Next, block 2410 checks the target element (again) for absolute position. If yes, then block 2412 appends the Source Element and Target Element to the child chain of *Element*(div). If no, then block 2414 inserts the Source Element before or after the Target Element.—

REMARKS/ARGUMENTS

The specification has been amended to reflect the splitting of Figure 24A into Figures 24A-1 and 24A-2. The information in the original Figure 24A was too large to fit within the requisite margins upon formalization of the figure. As a result, the figure was divided two separate sub-figures.

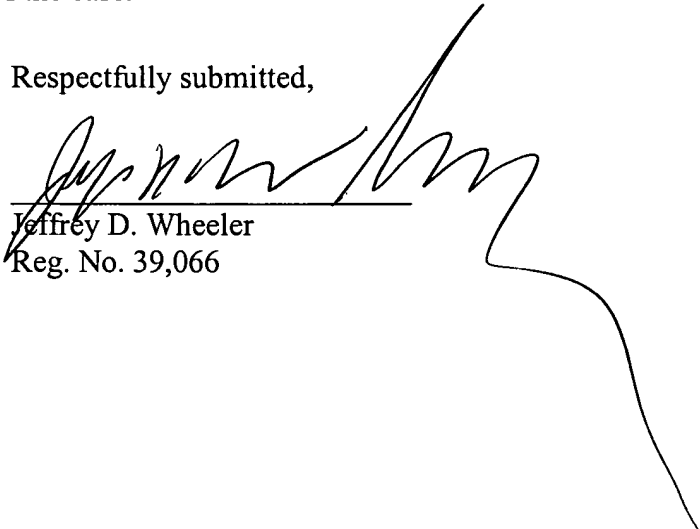

Attached hereto is a marked-up version of the changes made to the specification and claims by the current amendment. The attached page is captioned “**Version With Markings To Show Changes Made.**”

Applicant asserts that no new matter has been added, and respectfully requests that these amendments be considered in examination of the case.

Respectfully submitted,

Version With Markings To Show Changes Made

The paragraph beginning at page 8, line 21, has been amended as follows:

--Figures [24A-24B is] **24A-1, 24A-2, and 24B** show a representative flowchart and code sequence (pseudocode or other forms), according to one aspect of the present invention, showing updating the chain according to the action doBA

The paragraph beginning at page 27, line 1, has been amended as follows:

--Representative flowcharts and pseudocode for the user action routines are shown in Figures 24-30. Figures [24A-24B] **24A-1, 24A-2, and 24B** show the flowchart and pseudocode for the routine doBA (2310). As detailed above, the user selection "B" inserts the source element before the target element, and "A" inserts the source element after the target element. Block 2402 checks the Target Element for absolute position. If yes, block 2404 sets the div fields, sets the Target Element variables, replaces the *Element*(targetEle) with *Element*(div), and makes a new child chain of the *Element*(div). Block 2406 next checks if the Source Element is NULL. If yes, then a new source *Element* is retrieved in block 2407. Block 2408 checks the source element for absolute position. If yes, then the source *Element's* variables are set in block 2409. Next, block 2410 checks the target element (again) for absolute position. If yes, then block 2412 appends the Source Element and Target Element to the child chain of *Element*(div). If no, then block 2414 inserts the Source Element before or after the Target Element.--
